topic	detail
Question	Compare insurance policy benefits for the first quarter of 2025 with the fourth quarter of 2024, reporting the change (Q1 2025 less Q4 2024) in USD millions to one decimal place and the percentage change relative to Q4 2024 to two decimal places.
First quarter of 2025	$580.1 million - 'Insurance policy benefits' line item, three months ended March 31, 2025, in CNO_2025-03-31_10Q.xlsx worksheet T010 (Consolidated Statement of Operations, filing page 5).
Fourth quarter of 2024	$545.5 million, derived. CNO does not present a separate fourth-quarter statement of operations, so Q4 2024 = full year 2024 $2,471.9 million (CNO_2024-12-31_10K.xlsx worksheet T050, filing page 97) less nine months ended September 30, 2024 $1,926.4 million (CNO_2024-09-30_10Q.xlsx worksheet T010, filing page 5).
Derivation check	The same full-year-less-nine-months method reproduces every line the 10-K quarterly financial data note does disclose for Q4 2024 (CNO_2024-12-31_10K.xlsx worksheet T137, filing page 184): revenues $4,449.5 - $3,352.3 = $1,097.2; income before income taxes $518.3 - $307.8 = $210.5; net income $404.0 - $237.9 = $166.1. The note does not disclose insurance policy benefits, hence the derivation.
Result	Change = $580.1M - $545.5M = $34.6M. Percentage change = $34.6M / $545.5M = 6.34%.
Basis of presentation	Both quarters are taken as reported in the filings that report those periods (Q1 2025 Form 10-Q; FY 2024 Form 10-K less the Q3 2024 Form 10-Q nine-month amount). CNO_2025-06-30_10Q.xlsx covers a period after both comparison quarters and was not used for the reported amounts.
Limitation - later revisions	Neither compared quarter is presented on a restated basis in the supplied files, so both are used as reported. For context, CNO_2025-06-30_10Q.xlsx worksheet T016 (filing page 12) discloses immaterial error corrections, to be reflected in future filings, of +$15.6 million to insurance policy benefits for the nine months ended September 30, 2024 (market risk benefit accretion reclassification) and -$21.6 million for the year ended December 31, 2024 (embedded derivative overstatement). Restating only the nine-month input would give Q4 2024 of $529.9 million (change +$50.2 million, +9.47%); applying both corrections would give $508.3 million (change +$71.8 million, +14.13%). No revised Q1 2025 statement-of-operations amount is quantified in the supplied files, so restating one side only would break comparability between the two quarters.
Rounding	Source figures are USD millions to one decimal place. The change is rounded to one decimal place and the percentage change to two decimal places; percentages are computed on the unrounded derivation (545.5).
